# GCP Cloud Platform Security

**BUILD IN SECURITY FROM THE BEGINNING.** This engagement prepares your Google Cloud environment for security, scalability, and compliance so you can focus on your business. ScaleSec will walk through each major decision for each domain to customize the cloud to your business.

## Secure Cloud Preparation

Whether you are using Google Cloud for data services, containers, or serverless technologies—cloud security begins with building a platform you can trust.

This 16-week engagement includes several phases to prepare and instantiate your new Google Cloud environment:

- Sessions with technical leads
- Customization and testing
- Compliance controls integration
- Hands-on implementation
- Documentation throughout

## Platform Experts

ScaleSec will collaborate with your team to design a cloud organization structure that will grow with your business. The team will discuss, document, and implement key architectural decisions and configuration settings to help your team manage security consistently at scale.

## Intended Audience

Technology leaders are encouraged to participate in discussing important decisions. Engineers and product developers are also encouraged to join.

## Engagement Scope

This engagement covers a broad range of domains including:

- 🔒 Identity management
- 🔒 Billing setup
- 🔒 Resource hierarchy
- 🔒 Access management
- 🔒 Policy management
- 🔒 Networking and segmentation
- 🔒 Encryption and key management
- 🔒 Secrets management
- 🔒 Security operations setup
- 🔒 Log management
- 🔒 Automated deployment
- 🔒 Automated project setup

Compliance frameworks supported
