

GCP Cloud Security Capability

ScaleSec

GCP Cloud Security Capability

ELEVATE CRITICAL CLOUD SECURITY FUNCTIONS. This engagement prepares your Google Cloud environment for security capabilities. ScaleSec will walk through each major decision for each domain to customize Google Cloud security capabilities to your business.

Elevate your Security Domain in the Cloud

Whether you are performing Incident Response, Vulnerability Management, Continuous Monitoring, Cloud Governance, or other Security Capability domains in the cloud— we will help uplift and optimize your team's operations.

Each capability engagement includes several phases to build core security functions within your Google Cloud environment:

- ✓ Domain discovery sessions
- ✓ Cloud context educational workshops
- ✓ Code design
- ✓ Proof of Concept creation
- ✓ Tailored implementation code
- ✓ Security capability table top exercises
- ✓ Documentation throughout

Google Cloud Native Security

Use tools you already have to improve your security management capabilities, like:

- Security Command Center
- Cloud Identity
- Cloud KMS and Cloud HSM
- Data Loss Prevention (DLP)
- VPC Service Controls
- AWS Key Management Service
- AWS CloudHSM

Intended Audience

Security team and domain leaders are encouraged to participate in discussing important decisions. Engineers and product developers are also encouraged to join.

Engagement Scope

Capability engagements are available for a broad range of domains including:

- 🔒 Data Security
- 🔒 Identity Management
- 🔒 Vulnerability Management
- 🔒 Security Operations
- 🔒 Incident Response
- 🔒 Threat Hunting
- 🔒 Forensics
- 🔒 Security Architecture
- 🔒 DevSecOps

New capabilities can usually be online in 6-12 weeks.
