

Cloud Security Acceleration

ScaleSec

Cloud Security Acceleration

START BUILDING ON MONDAY! Be part of a security team that brings speed, innovation, and agility to your business. Learn how to bend the cloud to your will in this collaborative, intensive, practical, onsite workshop.

Workshop Topics

The cloud provides a wide range of pay-as-you-go services, with comprehensive security capabilities to satisfy the most demanding information security and compliance requirements. To ensure the most successful workshop, a ScaleSec consultant will work with you to develop a detailed workshop agenda tailored to your business.

Curriculum topics include an introductory overview of core cloud services:

- What the cloud provider does to secure its facilities, infrastructure, and services
- Creating and governing cloud resources at scale
- Hybrid cloud options to securely connect your network to the cloud
- Cloud-based identity management, access control, networking, and logging capabilities
- Data security management and encryption best practices
- Architecting for security, resilience, and cost
- Security-centric cloud services and when to use them
- How to meet compliance requirements in the cloud
- Disaster recovery and business continuity architectures
- Incident response and forensics
- Partner solutions for security and compliance objectives

Workshop Audience

This workshop assumes no prior cloud knowledge. Technical teams planning cloud workloads will get the most from this engagement. Because security touches many aspects of business, a diverse audience is recommended for collaboration.

Outbrief

The workshop includes a summary report that provides guidance for your team to take next steps to begin using cloud services securely. This report is tailored to your business, and includes:

- Instructor's recommendations for advancing your cloud maturity
- Summary of the top three workloads discussed in class
- Recommendations for continuing education & certification paths

At ScaleSec we specialize in helping customers meet the most demanding cloud security and compliance objectives. We are seasoned, certified professionals with years of security experience in the trenches.

We know the challenges your teams face, and the proven solutions to unblock them.
